Full Stack JavaScript Developer with 7+ years of experience designing and delivering scalable, high-performance web applications in agile environments. Expertise in modern front-end technologies including React, Angular, TypeScript, and JavaScript, with a strong focus on performance optimization, accessibility, and responsive UI development across devices.

Proficient in building end-to-end solutions using Node Js and Express Js, with hands-on experience in MongoDB and SQL databases. Skilled in designing clean, maintainable architectures and developing reusable components to improve development efficiency and product quality.

Experienced in automated testing using Cypress, and implementing CI/CD pipelines to ensure reliable and efficient deployments. Strong knowledge of Google Cloud Platform (GCP) and integration with analytics tools such as Google Analytics for data-driven decision making.

Collaborative team player with a strong understanding of Agile methodologies (Scrum/Kanban), experienced in working with cross-functional teams and tools like Jira and Confluence. Passionate about writing clean, efficient code and continuously improving system performance and user experience.

Technology

Frontend:

Next Js, React, Angular (v4–8), TypeScript, JavaScript (ES6+), HTML5, CSS3, SCSS, Bootstrap, Angular Material, RxJS

Backend:

Node Js, Express Js

Databases:

MongoDB, MySQL, PostgreSQL

Testing:

Cypress, Jest

Cloud & Tools:

Google Cloud Platform (GCP), Google Analytics

DevOps & Version Control:

Git, GitHub, CI/CD Pipelines

Tools:

VS Code, WebStorm, Figma

Methodologies:

Agile (Scrum, Kanban), Jira, Confluence

Professional Experience

Project Name: Kappla.

Project:

- Kappla is a web application used for People Management Capacity Planning. It helps store managers plan capacity of a coworker on store level . This application is employed for people operations transformation, enabling modification and management of working hours capacity and support different features among Coworkers.

Roles and Responsibility:

- Involved in working with a company's proprietary designing library system.
- Worked on upload and download functionalities using Java Script.
- Worked with the flex library to create templates.
- Involved in User interface Designing and worked on Functional Based Components.
- Involved in implementing graph for statistics and solving complex features.
- Involved in mapping **API** End Points using Fetch Promises.
- Involved in writing test cases in **JEST**

Methodology and Technology: React JS, Typescript, Fetch, PostgreSQL, GCP, Data Analytics, Sentry, Cypress

Project Name: True Availability.

Project:

- True Availability is a enhanced a real-time monitoring and analytics platform that visualizes the end-to-end customer journey across checkout, online shopping, customer fulfilment, and store operations. Developed graph-based dashboards with market-level filtering to track order trends across web and app channels, store opening status, delivery arrangements, time-window performance, and critical as well as business-critical incidents. Partnered with cross-functional teams to improve data quality, usability, and observability, enabling faster incident response, better operational decisions, and a stronger overall product experience.

Roles and Responsibility:

- Involved in developing product statistics data pages.
- Worked on the customised library for the design purpose.
- Involved in User interface Designing and worked on Functional Based Components.
- Implemented interaction with one of the slack channel and populating information on frontend.
- Created contact us interactions which redirects the user to the respective Teams channel or the Slack.
- Worked on **Chart JS** Library in implementing different charts with customisation options for the data statistics.
- Created various components and Designed using **React Bootstrap** and wrote media queries to support all the devices for responsive web pages.

Methodology and Technology: React JS, Redux, Node JS, Splunk.

Project Name: Wells Fargo Bank.

Website: <https://www.wellsfargo.com>

Project:

- **Wells Fargo** is an American multinational financial services corporation headquartered in San Francisco, California, with operational headquarters in Manhattan and managerial offices across the United States and internationally. The company operates in 35 countries and serves over 70 million customers worldwide. It is designated as a systemically important financial institution by the Financial Stability Board.

Roles and Responsibility:

- Designed using **PrimeNG** support all the devices for responsive webpages.
- Involved in User interface Designing.
- Worked on Authentication with JWT Tokens.
- Implemented the various API End Points.
- Involved in developing various Transaction pages.

Methodology and Technology: Angular 7, PrimeNG, Javascript, TypeScript, MySQL.

Project Name: myCAMS Online.

Website: <https://mycams.camsonline.com>

Project:

- An online platform for Mutual Fund Investments, providing a web application for mutual fund investors to manage their investments across various bank funds through a **Single Page Web Application**.

Roles and Responsibility:

- Designing GUI development using **Angular Material** for support to all the devices.
- Involved in User interface Designing.
- Involved in implementing SMS for the Application Download Link.
- Involved in developing various Transaction pages.

Project Name: CAMS Finserv Account Aggregator (Computer Age Management Systems)

Website: <https://www.camsfinserv.com>

Project:

- An Account Aggregator authorized by the Reserve Bank of India (RBI). As our prosperity grows, we tend to diversify our financial holdings across various types of assets, including Insurance, Mutual Funds, Structured Investment Products, Equity Shares, Government Bonds, Debentures, ETFs, Deposits with Non-Banking Finance Companies, and Pension schemes.

Roles and Responsibility:

- Involved in User Interface screen development using **Angular 7, Bootstrap, HTML, CSS** for Devices like Mobile, Tablet and Desktop.
- Involved in enhancement of Third party Integration module
- Involved in Front End Development with Angular Version 7 by creating **Modules, Components, Services and Pipes**.
- Added enhancements and development activities like **requirement ,design and development** with the development team.
- Involved in implementation of **Google Maps** to the Application.

Project Name: Digital OnBoarding

Project:

- **Digital OnBoarding** is a Single Page Web Application, representing an innovative initiative from Computer Age Management Services. It offers a convenient solution for onboarding PMS Clients digitally. With this platform, you can effortlessly onboard new PMS Clients, access and edit saved applications, and review the history of onboarded clients.

Roles and Responsibility:

- Involved in User Interface screen development, Designing of Components and bug fixes.
- Implemented user **Authentication** and **Authorisation** by **Consuming web services** using **REST API** client.
- Worked collaboratively with team members in order to optimise viable Solutions.
- Implemented **Drag and drop**, **Digital signature** for the **Online Demat** Applications.

Project Name: Edge 360

Website: <https://edge360.camsonline.com>

Project:

- A platform designed to efficiently manage the day-to-day operations of mutual funds, providing distributors with swift access to transaction status at every step through the 'Live Status Tracker' of transactions. It also enables the generation of investor statements, facilitates seamless transaction initiation, and allows for the monitoring of brokerage revenue.

Roles and Responsibility:

- Involved in Front End Development with Angular Version 6 by creating **Lazy loading** Modules, reusable components.
- Handling functionality and validation for the application and involved in implementing **Invisible Google Recaptcha**.
- Involved in developing NodeJs **OAuth2** and **REST API** Callback Services.
- Interacting with the client for requirement in all cases.

Methodology and Technology: HTML, CSS, Javascript, TypeScript, Angular 6, MySQL

Client: BHeads GmbH

Project Name: Better Heads

Website: <https://www.betterheads.de/de/>

Project:

- **Better Heads** is a German-based recruiting platform that enables companies to connect with the right recruiter or headhunter for each vacancy and task. It serves as the optimal interface between companies and HR service providers, facilitating smooth and successful collaborations.
- The Better Heads App is available in both English and German, making it accessible to a wider audience.

Roles and Responsibility:

- Designing GUI of the application, front end development using **Bootstrap**.
- Worked on **browser compatibility issues**.
- Involved in building a **Chat module** for the user in interview process.
- Involved in **translation** of page from **German** to **English**.

Methodology and Technology: Angular 8, JavaScript, TypeScript, HTML, CSS, MySQL.

Education

Bachelor of Engineering in Computer Science and Engineering
JNTU Anantapur University

Employments

2024 -06 to Present	IKEA IT AB
2021 - 02 to 2024 - 06	Capgemini Sverige AB
2019 - 02 to 2021 - 02	Sterling Software Private Ltd
2017 - 07 to 2018 - 10	Sutherland Global Services Private Ltd.
